AB - AU9880776 NOVELTY - In the preparation of a leach solution for oxidative leaching of nickel sulfide concentrate, copper ions, readily leachable copper salts compounds or copper metal is added to the leach solution or the nickel sulfide concentrate such that the copper catalyses the oxidative leaching of the nickel sulfide concentrate.

- DETAILED DESCRIPTION - A relatively high percentage of nickel and other valuable metals can be recovered from the nickel sulfide concentrate over a relatively short period of time.

- An INDEPENDENT CLAIM is included for the oxidative leaching of a nickel sulfide concentrate.

- USE - For oxidative leaching of nickel and other valuable metals from nickel sulfide concentrate.

- ADVANTAGE - The process is relatively quick and inexpensive and recovers a high percentage of nickel and other valuable metals.

- DESCRIPTION OF DRAWING(S) - The graph shows a base plot of nickel extraction versus grind size for a blended nickel sulfide concentrate without copper addition, using Mt Keith (MKO) and Leinster (LNO)

process water.
